Characteristics and typical fields of application

Rutile flux-cored wire of T 19 12 3 L P / E316LT1 type for welding of stainless steels such as EN 1.4435 / AISI 316L. The fast freezing slag offers excellent weldability and slag control in all positions. Easy handling and high deposition rate result in high productivity with excellent welding performance and very low spatter formation. Increased travel speeds as well as self-releasing slag with little demand for cleaning and pickling provide considerable savings in time and money. The wide arc ensures even penetration and side-wall fusion to prevent lack of fusion. Suitable for service temperatures from -120°C to 400°C. Resists intergranular corrosion up to 400°C. For flat and horizontal welding positions (1G, 1F and 2F) VENVU 316 L may be preferred.

Operating data

	Ø (mm)	Wire feed m/min	Arc length mm	Current A	Voltage V
1	0.9	8.0 – 15.0	~ 3	100 – 160	22 – 27
2	1.2	6.0 – 15.0	~ 3	150 – 280	22 – 30
3	1.6	4.5 – 9.5	~ 3	200 – 360	23 – 28

Welding with standard GMAW power source with DC+ polarity. No pulsing needed. Backhand (drag) technique preferred with a work angle of appr. 80°. Ar + 15 – 25% CO₂ as shielding gas offers the best weldability. 100% CO₂ can be also used, but the voltage should be increased by 2 V. The gas flow should be 15 – 18 l/min. The heat input should not exceed 2.0 kJ/mm, the interpass temperature be limited to max. 150°C and the wire stick-out 15 – 20 mm. The scaling temperature is approx. 850°C in air. Post-weld heat treatment generally not needed. In special cases, solution annealing can be performed at 1050°C followed by water quenching.
